LANDSCAPE ARCHITECTURE

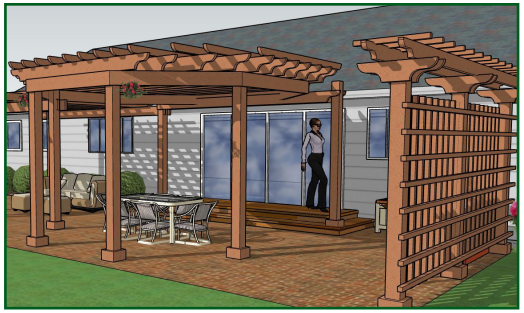
A successful landscape project is a living work of art. The finished project should be the convergence of quality construction, creative design and cultivating the needs/ wants of the client both during and after the project is completed.



Every landscape project has unique features and challenges; design, terrain, budgets, accessibility and client expectations. The creativity required to successfully integrate these challenges and deliver the desired outdoor living environment is what we do best.

PROJECT BUDGETING

THOMAS NORDLOH ASSOCIATES design philosophy is to understand our client's budget concerns without impeding our creativity. Throughout the design process we will inform our clients of the overall landscape installation costs, suggest value engineering ideas while keeping our focus on high quality design.

PROJECT MANAGEMENT

"Project Management is the art of directing and coordinating human and material resources throughout the life style of a project by using modern management techniques to achieve predetermined objectives of scope, cost, time, quality and participation satisfaction."

THOMAS NORDLOH ASSOCIATES offers Landscape Project Management to ensure our clients project is installed according to the landscape plan with quality landscape construction technicians and the industries highest quality plants and materials.

Landscape construction operations involve planning, procurement of materials and equipment and supervision of the landscape installation.
